3 Introduction

3.1 Project Summary

3.1.1 Objectives

- 1- To provide a comprehensive and user-friendly platform for event planning that covers all key aspects of event management, including the event itself, venue, budget, sponsors, volunteers, marketing, equipment, and attendees.
- 2- To streamline the event planning process and reduce the risk of errors and miscommunication by providing a centralized platform for team members, vendors, sponsors, and attendees to collaborate and manage tasks.
- 3- To incorporate gamification features that encourage users to use the system more frequently and consistently and motivate them to improve their event planning skills. This includes rewarding users with points or badges when they add an event to the system, allowing users to compete, and displaying a leaderboard of top users or teams.
- 4- To make event planning more engaging, fun, and rewarding for users, which will ultimately lead to more successful events.
- 5- To provide a customizable and adaptable platform that can be used for events of all sizes and types, from small corporate events to large-scale music festivals.
- 6- To improve the efficiency and effectiveness of event planning, resulting in cost savings, increased productivity, and better outcomes for event organizers, attendees, sponsors, and vendors.

Overall, the objective of the Event Management System project is to provide a comprehensive and effective solution for event planning that incorporates gamification features to make event planning more engaging, motivating, and fun for users while improving their event planning skills and knowledge.

3.1.2 Background

- 1- Events play an important role in the modern business landscape. They provide businesses with the opportunity to connect with customers, showcase products or services, and build brand awareness. However, organizing an event can be a complex and time-consuming process, involving multiple stakeholders and numerous details that need to be managed effectively.
- 2- To address this challenge, an event management system is proposed that can help businesses keep track of every detail related to an event, both large and small, and collaborate with vendors, partners, and team members to execute a successful event. The event management system will cover various aspects of event planning, including the event, venue, budget, sponsors, volunteers, marketing, equipment, and attendees.
- 3- The proposed event management system will be designed to meet the needs of businesses of all sizes and budgets, from small businesses organizing local events to large corporations hosting international conferences. The system will provide a user-friendly interface that will enable users to create and manage events, track budget and expenses, collaborate with team members and vendors, and communicate with attendees.

In summary, the proposed event management system will provide businesses with a comprehensive solution for event planning, enabling them to save time and resources, reduce the risk of errors or oversights, and execute successful events that meet their goals and objectives.

3.1.2.1 Business Drivers

1-Increased Efficiency: By having a centralized system for tracking every detail related to an event, a gamified event management system can help streamline the planning and execution process, reducing the time and effort required to plan a successful event.

2-Cost Savings: By managing budgets, sponsors, and equipment within the system, event planners can potentially save costs by avoiding overspending, identifying cost-saving opportunities, and negotiating better deals with vendors and sponsors.

3-Improved Collaboration: With the ability to collaborate with vendors, partners, and team members, a gamified event management system can help improve communication and coordination, reducing the risk of miscommunication and mistakes.

4-Increased Attendance: With features to manage marketing and attendees, a gamified event management system can help event planners attract more attendees and keep them engaged throughout the event.

5-Competitive Advantage: By providing a comprehensive and user-friendly tool for event planning, a gamified event management system can help event planners differentiate themselves from competitors and potentially win more business.

6-Environmental Sustainability: With a focus on digital planning and collaboration, a gamified event management system can help reduce paper waste and other environmentally harmful practices associated with event planning.

Overall, developing a gamified event management system can provide significant business benefits by increasing efficiency, cost savings, collaboration, attendance, competitive advantage, and environmental sustainability.

3.2 Project Scope

- 1- The scope of this project is to design and develop a gamified event management system that helps users manage every detail related to an event. The system will include the following modules: event, venue, budget, sponsors, volunteers, marketing, equipment, and attendees.
- 2- The event module will allow users to create and manage events, including event details such as date, time, location, and theme. The venue module will help users find and book venues for their events and will include features such as search and filtering by location, capacity, and amenities.
- 3- The budget module will allow users to set and manage budgets for their events, including tracking expenses and revenues. The sponsors module will help users find and manage sponsors for their events and will include features such as sponsor search and management, sponsorship proposal creation, and sponsor tracking.
- 4- The volunteer module will allow users to recruit and manage volunteers for their events, including volunteer search and management, volunteer scheduling, and volunteer tracking. The marketing module will help users promote their events, and will include features such as email marketing, social media marketing, and advertising.
- 5- The equipment module will allow users to rent or purchase equipment for their events, including audio-visual equipment, lighting, and furniture. The attendee's module will help users manage attendee registration and attendance tracking, including features such as ticketing, guest list management, and check-in.

Out of Scope:

The following features are out of scope for this project:

- Customization of the software beyond what is necessary to meet the basic needs of event management.
- Development of mobile applications or other specialized interfaces beyond the web-based user interface.
- Physical infrastructure or hardware beyond what is necessary to provide the software as a service.

This scope is designed to prevent "**scope creep**" of additional features and functions not originally anticipated, and is based on the current budget, resources, and timeline approved by the project stakeholders.

Any changes to this scope will require approval from the project stakeholders and may result in adjustments to the budget, resources, and timeline.

3.2.1 In Scope Functionality

The following is a list of in-scope functionalities for a gamified event management system:

- **Event creation:** The system should allow users to create and manage events by setting event details, dates, and times.
- **Venue management:** The system should enable users to add and manage venues for the events, including details such as location, capacity, and layout.
- **Budget management:** The system should allow users to create and manage budgets for the event, including tracking expenses, revenue, and payments.
- **Sponsor management:** The system should enable users to manage sponsor information, such as contact details, logos, and sponsorship levels.
- **Volunteer management:** The system should allow users to manage volunteer information, including roles, schedules, and availability.
- **Marketing management:** The system should enable users to manage event marketing materials, including social media posts, email campaigns, and advertisements.
- **Equipment management:** The system should allow users to manage equipment needs, including ordering, tracking, and inventory management.
- **Attendee management:** The system should enable users to manage attendee information, including registration, ticketing, and check-in.
- **Gamification:** The system should incorporate gamification elements, such as badges, points, and leaderboards, to motivate and engage users in the event planning process.
- **Collaboration:** The system should enable users to collaborate with vendors, partners, and team members, including sharing files, assigning tasks, and communicating via chat or messaging.

3.2.2 Out of Scope Functionality

- **Travel Arrangements:** The system does not provide any functionality related to booking travel arrangements for attendees or arranging transportation for the event.
- **Accommodation Booking:** The system does not provide any functionality related to booking accommodation for attendees or managing lodging arrangements for the event.
- **Legal and Compliance:** The system does not provide any functionality related to legal and compliance requirements for the event, such as permits, licenses, or insurance.

3.3 System Perspective

- The gamified event management system aims to help event planners manage and execute successful events by providing a comprehensive platform that covers various aspects of event planning. However, several factors could affect the successful implementation of the system.
- One critical factor is legal and regulatory compliance. Different countries and regions have various laws and regulations governing event management, which could limit the system's functionality or prevent its use altogether. Therefore, it's crucial to ensure that the gamified event management system complies with all applicable legal and regulatory requirements in the target market.
- Existing technical or operational limitations in the environment could also hinder the successful implementation of the system. For instance, the system may require high-speed internet connectivity or advanced computing resources, which may not be available in certain areas. As such, it's essential to assess the target environment's technical and operational limitations to ensure that the system can function optimally.
- Budget and resource constraints are also critical factors that could affect the successful implementation of the gamified event management system. The development, deployment, and maintenance of the system require significant financial and human resources. Therefore, it's essential to assess the available budget and resources to determine if they are sufficient to support the successful implementation of the system.

In conclusion, the gamified event management system has the potential to streamline event planning and execution processes. However, to ensure its successful implementation, it's critical to consider legal and regulatory compliance, existing technical or operational limitations, and budget/resource constraints. By addressing these factors, the system's developers can accelerate the project's success and help event planners execute successful events.

3.3.1 Assumptions

- 1- The Gamified event management system is designed to handle events of various sizes and types, from small community events to large-scale conferences or festivals.
- 2- The system is flexible and can be customized to meet the specific needs and requirements of different events, including different types of venues, budgets, sponsors, volunteers, marketing strategies, equipment, and attendees.
- 3- The system is designed to improve collaboration and communication among various stakeholders involved in event planning and execution, including vendors, partners, team members, and volunteers.
- 4- The system includes features for managing event logistics, such as venue selection, budgeting, equipment rentals, and attendee registration.
- 5- The system includes features for managing event marketing, such as social media promotion, email campaigns, and advertising.
- 6- The system includes features for managing event sponsors, such as sponsor outreach, sponsor packages, and sponsor tracking.
- 7- The system includes features for managing event volunteers, such as volunteer recruitment, training, scheduling, and communication.
- 8- The system is designed to be user-friendly and easy to navigate, even for users with limited technical skills or experience with event planning software.
- 9- The system includes reporting and analytics features to help event planners track key metrics and measure the success of their events.

3.3.2 Constraints

Constraints are limitations or boundaries that impact the design, development, or implementation of a system. Here are some possible constraints that could impact the development of a gamified event management system:

- **Time Constraints:** The system must be developed and implemented within a specific timeline to ensure that it is available for use prior to the event.
- **Budget Constraints:** The system must be developed and implemented within a specific budget, which may limit the features and functionality that can be included.
- **Technology Constraints:** The system must be compatible with existing hardware, software, and networking infrastructure to ensure seamless integration with other systems.
- **Security Constraints:** The system must be designed with appropriate security measures to protect sensitive data such as attendee information and financial transactions.
- **User Constraints:** The system must be user-friendly and accessible to all stakeholders involved in the event planning and execution, including event organizers, vendors, sponsors, volunteers, and attendees.
- **Integration Constraints:** The system must be able to integrate with other systems used by the event organizers, such as social media platforms, ticketing systems, and marketing tools.

- **Regulatory Constraints:** The system must comply with relevant regulations, such as data privacy laws, to ensure that all data collected and stored is done so in a legal and ethical manner.
- **Scalability Constraints:** The system must be able to handle events of varying sizes, from small gatherings to large conferences, and be scalable to accommodate future growth and expansion.

3.3.3 Risks

While gamified event management systems can bring many benefits, there are also several risks that need to be considered:

- **Technical Issues:** The software may experience technical problems or downtime, leading to delays and difficulties in accessing important information.
- **Data Security:** The software may store sensitive information such as attendee data, financial information, and other confidential data, making it a potential target for cyber-attacks or data breaches.
- **User Error:** With any new software, there is a risk of user error or misunderstandings, which could result in data being input incorrectly or important details being missed.
- **Compatibility Issues:** The software may not be compatible with all devices and operating systems, which could limit the accessibility and use of the software for certain team members or partners.
- **Training and Adoption:** The software may require training and adoption time for team members, which could slow down the planning process and potentially lead to resistance to change.
- **Dependence on Software:** There is a risk that the team may become overly reliant on the software and neglect important aspects of event planning that are not covered by the software.
- It's important to assess these risks and take steps to mitigate them when implementing a gamified event management system to ensure the success of your event.

3.3.4 Issues

User adoption: If the gamified event management system is complex or difficult to use, users may not be willing to fully adopt it. This could lead to incomplete data or missed tasks, which could impact the success of the event.

Integration with existing systems: Depending on the size and complexity of the event, there may be other systems or tools in use (such as ticketing software or marketing automation platforms) that need to integrate with the gamified event management system. Ensuring that these integrations work seamlessly can be a challenge.

Technical issues: As with any software system, there is the potential for technical issues to arise, such as bugs, downtime, or compatibility issues with certain devices or browsers.

Data security: The gamified event management system may collect and store sensitive information (such as attendee data or financial information), so it's important to ensure that the system is secure and that data is protected from unauthorized access or breaches.

Cost: Depending on the specific software being used, the cost of a gamified event management system could be a significant expense, particularly for smaller events or organizations with limited budgets. It's important to weigh the benefits of the system against the cost to determine if it's a worthwhile investment.

4 Business Process Overview

4.1 Current Business Process (As-Is)

5 Business Requirements

[The specific business requirements elicited from stakeholders should be listed, categorized by both priority and area of functionality to smooth the process of reading and tracking them. Include links to use case documentation, and other key reference material as needed to make the requirements as complete and understandable as possible. You may wish to incorporate the functional and non-functional requirements into a traceability matrix that can be followed throughout the project.]

The requirements in this document are prioritized as follows:

Value	Rating	Description
1	Critical	This requirement is critical to the success of the project. The project will not be possible without this requirement.
2	High	This requirement is high priority, but the project can be implemented at a bare minimum without this requirement.
3	Medium	This requirement is somewhat important, as it provides some value but the project can proceed without it.
4	Low	This is a low priority requirement, or a “nice to have” feature, if time and cost allow it.
5	Future	This requirement is out of scope for this project, and has been included here for a possible future release.

5.1 Functional Requirements

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
General / Base Functionality					
FR-G-001	1	Event Creation: User Create event as the Event is created by event organizer account	As it's the main task for the website creating an event and publish a post about this event		Development teams Infrastructure engineers

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-G-002	2	Blogs: As blogs play a very important role in marketing and reviewing and receiving feedbacks from the user	Important for marketing and receiving feedbacks		Development teams Infrastructure engineers
FR-G-003	3	Gallery: Add a several photos by many accounts (Normal User, Event Organizer)	Important to review photos of events happened		Development teams Infrastructure engineers
FR-G-004	4	Chatbot: Answer the FAQ	Important For the user to know many answers		Development teams Infrastructure engineers
FR-G-005	3	Gamification: Give the user reward Through Points and badges	Important For the user to know many answers		Development teams Infrastructure engineers
FR-G-006	2	Create Post: User can post events he/she participated in it or any reviews about specific event.	Important to gain feedback from the user		Development teams Infrastructure engineers
FR-G-007	4	User Profile: User can view his own badges, videos and posts and can fit a profile pic	Important to make the user more able to know his achievements and his progress throughout the website.		Development teams Infrastructure engineers
Security Requirements					
FR-S-001	1	User can not create Event if he is not logged in as Event Organizer			Development teams Infrastructure engineers

Reporting Requirements

FR-R-001	0	TBD			
----------	---	-----	--	--	--

Usability Requirements

FR-U-001	1	User interface for the User and easy to interact with the website			Development teams Infrastructure engineers
----------	---	---	--	--	---

Audit Requirements

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-A-001	1	Any change to a widget name record shall be appended with user ID and date/time stamp.			

5.2 Non-Functional Requirements

[Include technical and operational requirements that are not specific to a function. This typically includes requirements such as processing time, concurrent users, availability, etc.]

ID	Requirement
NFR-001	The system should be able to handle the load of data and users during peak periods and provide fast response times.
NFR-002	The system should be designed to handle growth and changes in the event's size and complexity without compromising performance.
NFR-003	The system should be user-friendly and intuitive, making it easy for event planners, vendors, partners, and volunteers to use and navigate.
NFR-004	The system should have adequate technical support and resources available to assist users with any issues or questions that may arise.
